

TRANSFORMING CARE FOR WOMEN WITH RARE DISEASES

1

RESEARCH GOALS

- Understand the lived experiences of women with rare diseases.
- Identify barriers in healthcare, employment, and relationships.
- Co-design non-drug interventions based on insights

2

METHODOLOGY REVIEW

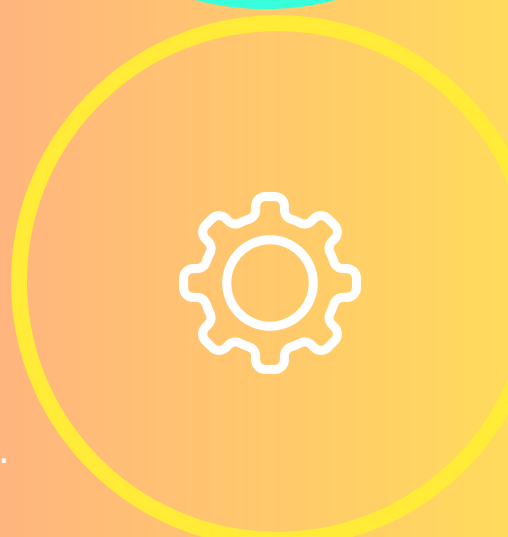

- Scoping Review:
Examined “x” research papers and grey literature documents.
Focused on social, physical, and emotional experiences.
- Participant Recruitment:
24 women globally were engaged to represent diverse perspectives.
Inclusion criteria emphasized intersectionality and qualitative insights.
- Data Collection:
Semi-structured interviews.
Participant journey mapping for emotional and practical challenges.
- Analysis:
Thematic coding in NVivo.
Themes synthesized “y” frameworks.

3

KEY THEMES EXPLORED

- Emotional and physical challenges.
- Workplace discrimination and barriers.
- Healthcare gaps.
- Social and familial relationship dynamics.

4

VALIDATION AND NEXT STEPS

- Co-Design Workshops: Validate findings with patient advocate groups and refine interventions.
- Iterative Feedback: Incorporate user feedback into support solutions.
- Future Research Directions: Focus on underexplored demographics.

5

OUTPUTS

- Journey maps illustrating user experiences.
- Recommendations for tailored interventions and policy improvements.
- Insights to inform healthcare and employment strategies
